[Notifications and Notices Issued by the Patent Office relating to Patents and Designs]

THE PATENT OFFICE
PATENTS AND DESIGNS

Kolkata, the 5th June 2004

ADDRESSES AND JURISDICTION OF THE OFFICES OF THE PATENTS OFFICE

The Patent Office has its Head Office at Kolkata and Branch Offices at Mumbai, Delhi and Chennai having Territorial Jurisdiction on a Zonal basis as shown below:—

1. Patent Office Branch,
Todi Estates, IIIrd Floor,
Sun Mill Compound,
Lower Parel (West),
Mumbai-400 013.

The States of Gujarat,
Maharashtra, Madhya Pradesh
and Goa and the Union
Territories of Daman and
Diu & Dadra and Nagar Haveli.

Telegraphic Address "PATOFFICE"
Phone Nos. (022) 2492 4058, 2496 1370, 2492 3684,
2490 3852
Fax Nos. (022) 2495 0622, 2490 3852
E-mail: patnum@vsnl.net

2. Patent Office Branch,
W-5, West Patel Nagar,
New Delhi-110 008.

The States of Haryana,
Himachal Pradesh,
Jammu and Kashmir,
Punjab, Rajasthan,
Uttar Pradesh and Delhi and the
Union Territory of Chandigarh.

Telegraphic Address "PATENTOFIC"
Phone Nos. (011) 2587 1255, 2587 1256,
2587 1257, 2587 1258.
Fax No. (011) 2587 1256.
E-mail: delhipatent@vsnl.net

3. Patent Office Branch,
Guna Complex, 6th Floor, Annex-II,
443, Annasalai, Teynampet,
Chennai-600 018.

The States of Andhra Pradesh,
Karnataka, Kerala, Tamil Nadu and
Pondicherry and the Union
Territories of Laccadive, Minicoy and
Aminidivi Islands.

Telegraphic Address "PATENTOFFIC"
Phone Nos. (044) 2431 4324/4325/4326.
Fax Nos. (044) 2431 4750/4751.
E-mail. patentchennai @ vsnl. net

4. Patent Office (Head Office),
Nizam Palace, 2nd M.S.O. Building,
5th, 6th & 7th Floor,
234/4, Acharya Jagadish Bose Road,
Kolkata-700 020.

Rest of India

Telegraphic Address "PATENTS"
Phone Nos. (033) 2247 4401, 4402/4403.

Fax Nos. (033) 2247 3851, 2240 1353.

All applications, notices, statements or other documents or any fees required by the Patents Act, 1970 and the Patents (Amendment) Act, 2002 or by the Patents Rules, 2003 will be received only at the appropriate offices of the Patent Office.

Fees : The fees may either be paid in cash or may be sent by Bank Draft or Cheques payable to the Controller of Patents drawn on a scheduled Bank at the place where the appropriate office is situated.

पेटेंट कार्यालय

एकस्व तथा अभिकल्प

कोलकाता, दिनांक 5 जून 2004

पेटेंट कार्यालय के कार्यालयों के पते एवं क्षेत्राधिकार

पेटेंट कार्यालय का प्रधान कार्यालय कोलकाता में अवस्थित है तथा मुम्बई, दिल्ली एवं चेन्नई में इसके शाखा कार्यालय हैं, जिनके प्रादेशिक क्षेत्राधिकार जोन के आधार पर निम्न रूप में प्रदर्शित हैं:--

1. पेटेंट कार्यालय शाखा,
टोडी इस्टेट, तीसरा तल,
सन मिल कम्पाउंड,
लोअर पेरल (वेस्ट),
मुम्बई - 400 013 ।

गुजरात, महाराष्ट्र, मध्य प्रदेश तथा
गोआ राज्य क्षेत्र एवं
संघ शासित क्षेत्र, दमन तथा दीव एवं
दादर और नगर हवेली ।

तार पता : "पेटेफिर"

फोन : (022) 2492 4058, 2496 1370, 2490 3684, 2490 3852

फैक्स : (022) 2495 0622, 2490 3852

ई. मेल : patnum@vsnl.net

2. पेटेंट कार्यालय शाखा,
डब्ल्यू-5, वेस्ट पटेल नगर,
नई दिल्ली - 110 008 ।

हरियाणा, हिमाचल प्रदेश, जम्मू
तथा कश्मीर, पंजाब, राजस्थान,
उत्तर प्रदेश तथा दिल्ली राज्य
क्षेत्रों एवं संघ शासित क्षेत्र चंडीगढ़ ।

तार पता : "पेटेटोफिक"

फोन : (011) 2587 1255, 2587 1256, 2587 1257,
2587 1258.

फैक्स : (011) 2587 1256.

ई. मेल : delhipatent@vsnl.net

3. पेटेंट कार्यालय शाखा,

गुना कम्प्लेक्स, छत्र तल, एनएस-II,
443, अन्नासलाई, तैनामपेट,
चेन्नई - 600 018 ।

आन्ध्र प्रदेश, कर्नाटक, केरल, तमिलनाडु
तथा पाण्डिचेरी राज्य क्षेत्र एवं संघ
शासित क्षेत्र लक्षद्वीप, मिमिकाय तथा एमिनिदिब द्वीप ।
तार पता - "पेटेटोफिक"

फोन : (044) 2431 4324/4325/4326.

फैक्स : (044) 2431 4750/4751.

ई. मेल : patentchennai@vsnl.net

4. पेटेंट कार्यालय (प्रधान कार्यालय),
मिजान पैलेस, द्वितीय बहुतलीय कार्यालय
भवन, 5वां, 6वां व 7वां तल,
234/4, आचार्य जगदीश बोस मार्ग,
कोलकाता - 700 020 ।

भारत का अवशेष क्षेत्र ।

तार पता - "पेटेंट्स"

फोन : (033) 2247 4401, 4402/4403.

फैक्स : (033) 2247 3851, 2240 1353.

ई. मेल : patentin@vsnl.com

patindia@glasci01.vsnl.net.in

वेब साइट : <http://Ipindia.nic.in>

पेटेंट अधिनियम, 1970 तथा पेटेंट (संशोधन) अधिनियम, 2002
अथवा पेटेंट नियम, 2003 द्वारा अपेक्षित सभी आवेदन, सूचनाएं, विवरण
या अन्य दस्तावेज या कोई फीस पेटेंट कार्यालय की कोचल समुचित
कार्यालय में ही प्रेषण किए जाएंगे ।

शुल्क : शुल्कों की अदायगी या नौ नकद की जाएगी अथवा
जहाँ उपयुक्त कार्यालय अवस्थित है, उस स्थान की अनुसूचित बैंक से
निर्वहन, पेटेंट की भुगतान योग्य बैंक द्राफ्ट अथवा बैंक द्वारा की जा
सकती है ।

---	---

(57) Abstract : A four wheeler vehicle in which the steering system is improved to provide capability to the vehicle to steer the vehicle further to achieve reduced turning space up to full steering,. Means are provided in the vehicle to allow the speeds of the differential output shafts to adjust to the vehicle steering geometry, the steered wheel reaction and other ground reactions. Also the driver is not required to do anything additional than to steer the vehicle further to achieve reduced turning space.

---	--

(57) Abstract : This invention relates to process for manufacture of a stable, oral, multiple unit pharmaceutical composition containing high concentration of benzimidazole upto about 40% w/w without the use of micronized benzimidazole, disintegrating agent and fillers. Surfactants in these compositions are in enteric polymer layer and not in contact with benzimidazole. Multiple unit pharmaceutical composition of the invention shows minimum acid degradation in 0.1N HCl after two hours and pH 6.8 buffer release of more than 85% w/w after 45 minutes. Multiple unit pharmaceutical composition is in the form unagglomerated, uniformly shaped and sized enteric-coated pellets, which are processed continuously or in batches in single equipment such as fluid bed bottom spray processor. The invention involves sequential deposition of a) alkaline material layer on non-pariet seeds to obtain treated non-pariet seeds b) drug layer to obtain drug pellets c) sealant polymer layer to obtain sealed pellets d) enteric polymer layer to obtain enteric coated pellets. The enteric-coated pellets obtained are capable of being filled in smallest size capsules (size 5) for ease of administration and patient acceptance.

(57) Abstract : A coloured speckle composition for use in particulate laundry detergent compositions comprising a porous granular carrier and at least 0.01 wt% photobleach, preferably at least 0.5 wt% , more preferably at least 0.1 wt%, based on the active ingredient, the composition having an average bulk density of at most 600 g/l, preferably at most 500 g/l, most preferably at most 400 g/l. The carrier system reduces the staining tendency of the photobleach. The most preferred carrier is spray dried detergent base powder. The most preferred photobleach is a blend of Zn and Al sulphonated phthalocyanine.

(57) Abstract : The invention relates to novel selective herbicidal compositions comprising an active compound combination consisting of substituted arylsulphonylaminocarbonyl-triazolinones and/or salts thereof and at least one compound which improves crop plant compatibility from the following group of compounds of the general formula (II),

In which n, m, X, Y and Z are as defined in the description, it being possible to use the compositions with particularly good results for the selective control of weeds in various crops of useful plants. The invention also relates to the use of these compositions for controlling undesirable vegetation and to the corresponding method for this use.

(57) Abstract : The invention provides a process for the preparation of detergent bars not containing clay comprising the steps of

- a) reacting the precursor of a detergent active with an alkaline material;
- b) adding a mixture of at least one polyol and boron containing compound;
- c) adding sodium alumine silicate or generating in situ sodium aluminosilicate by allowing a source of monomeric aluminium to condense with silicate anion;
- d) adding if desired other detergent actives, builders and minor ingredients; and converting the product into bars by conventional method. The resulting bar includes 5-70% by weight of detergent active, 0.5 to 30% by weight of boron-polyol gel, 1-15% by weight of aluminosilicate, and water.

(57) Abstract : A multiple output shaft gearbox is an integrated gearbox, which combines two stages of drives in one housing. The speed reduction stage is on the input side. And uses worm and wormshaft drive for transmitting the power. The wormshaft is mounted in taper roller bearings housed in the gearbox body. A pulley or a chainsproket mounted and keyed to this wormshaft outside the gearbox body drive this shaft. This wormshaft drives the wormgear wheel, which is keyed, to the lay shaft. The spur gear, which is mounted on this lay shaft, is driven by the worm gear wheel. This spur gear in turn drives the gears mounted on the output shafts. The lay shaft is mounted on bearings housed in body plates. And the output shafts are themselves mounted in bearings housed in body plates and division plate. The end result is , only one input drive and 2,3 or 4 output drive at the desired speed. The gearbox body and the keys on output shaft are delgined to make the assembly of the gearbox convenient.

(57) Abstract : Disclosed herein, unique design configuration of I.C. Engine exhaust silencers forming combination of typically six cavities & opening of varying volume & areas, each offering reactive impedance to noise whose frequency domain varies differently between octave band spectrum of fundamental frequency of exhaust noise. Through inlet port flue gas & noise (110 dBA) enters diffuser cavity and divided through 8 to 16 perforated tube, strikes oppositely facing dish end at $\frac{1}{4}$ then reciprocates between two dish ends at distance $\frac{1}{4}$ impedes between two baffles at $\frac{1}{4}$ absorbs cancels & nullifies at focal point of both dish ends co-inciding at zero cross over point of incident & reflected wave. Outlet is located at Null point focus at 90° plane to inlet. To meet Holmholtz cavity resonance outer silencer chamber diameter is varied between 3 to 5 times inlet port diameter. Dimn 'A' is varied for fine adjustment of required volume Δ . Inner walls of silencer are optionally lined with porous calcium carbonate. Noise level at outlet less than 55 dBA.

(57) Abstract: Plasma torch based pyrolysis system has been developed, wherein the secondary chamber is constructed around the primary chamber and the exhaust gases from the primary chamber are burnt in the annular space between the primary chamber and the secondary chamber to provide positive energy feed back into the system. This technique makes smaller pyrolysis system, energy efficient. This arrangement also reduces load from the scrubber. In addition, the feeding is made automatic for trouble free operation. The feeder is purged with nitrogen gas to eliminate the possibility of explosive reaction. The main features of this technique are discussed below in detail.

(57) Abstract : The present invention relates a surfactant composition for use as an emulsifier in water blended fuel mixture. The said composition includes ethoxylate of cashew nut shell liquid which. In addition ethoxylate of cashew nut shell liquid, the said composition comprises a co-surfactant having a hydrophilic lipophilic balance in the range of 4 to 12 and a polymeric dispersant. The water blended fuel mixture using emulsifiers of the present invention, overcome some of the shortcomings of the previously known emulsions. The ethoxylate of cashew nut shell liquid is of the formula.

---	--

(57) Abstract : The present invention relates to a novel energy efficient multi-stage regenerator, for regenerating liquid desiccant (LD), and further relates to the application of rotating contacting disks to provide intimate contact between LD and vapour/gas without problems of carryover of LD in to the vapour/gas stream or flooding and suitable for low liquid throughputs, with significant change in concentration.

An energy efficient multi-stage regeneration process (EEMSRP) along with components for regenerating liquid desiccant (LD) comprising partial or complete regeneration of LD in a Low Temperature regenerator (LTR), partial or complete regeneration of LD in a Intermediate Temperature Regenerator (ITR), partial or complete regeneration of LD in a High Temperature Regenerator (HTR), desuperheating of vapour generated in HTR in a heat exchanger (HTRHE) while preheating the LD before entering HTR, subcooling of LD regenerated in HTR in HTRHE while preheating the LD before entering HTR, condensation of desuperheated vapour from HTRHE in heat exchanger inside ITR while regenerating LD, desuperheating of vapour generated in ITR in a heat exchanger (ITRHE) while preheating the LD before entering ITR and/or HTR, subcooling of LD regenerated in ITR in ITRHE while preheating the LD before entering ITR and/or HTR, subcooling of condensate from ITR in ITRHE while preheating the LD before entering ITR and/or HTR, desuperheating of vapour generated in ITR in a ITRHE while preheating the LD before entering ITR and/or HTR, condensation of desuperheated vapour from ITRHE in "passages" thermally in contact with LTR while regenerating LD, flowing of vapour/gas through LTR with the aid of and arrangement such as chimney/fan to pickup the vapours from LD, subcooling of LD regenerated in LTR in LTRHE while preheating the LD before entering LTR and/or ITR and/or HTR, subcooling of condensate from LTR in LTRHE while preheating the LD before entering LTR and/or ITR and/or HTR, wherein the number of stages in the regeneration process is (2+n) where n is the number of ITR's in the process.

A system for energy efficient single stage regeneration process and components for regenerating liquid desiccant (LD) comprising LTR, incorporating large surface density contacting device, having provision to heat the LD using heat from an external source in passages which are in thermal contact with a container such as through containing the LTR, optional arrangement such as a hood with chimney to aid the flow of ambient air through LTR to pickup the moisture from LD, a device to rotate/oscillate the contacting discs assembly in the LTR, optional heat exchanger used to recycle heat to enhance the energy efficiency of the process and liquid desiccant pump.

The main advantages of energy efficient multi-stage regeneration of LD are no carryover problem, no orifices or nozzles to wear or log, modular system that can be installed with flexibility, silent operation without splashing or spraying sounds and low auxiliary electrical power consumption.

(57) Abstract : A process for manufacture of an oral sustained release tablet dosage form having one or more drugs in a floating, swellable and bioadhesive carrier composition, comprising a powder of a drug or a drug powder composition comprising one or more drugs compatible with each other, which are mainly used for sustained release formulation preferably, once daily formulation. A novel carrier composition comprising gel forming and bioadhesive fiber, a swelling agents, one or more of hydrophilic water soluble polymers, gas generating agent and excipients. Above mentioned carrier composition also contains channelling agent which increases initial burst release of the drug. Sieving and blending of all the ingredients of the tablet composition together that is followed by wet granulation using polyvinyl pyrrolidone (5% solution in isopropyl alcohol). Granules were compressed into a tablet after lubrication.

The process of the present invention is particularly useful for once daily sustained release formulations. The process of the present invention is also particularly useful for orally administering the group of drugs having an absorption window in the specific regions of stomach or upper parts of the small intestine, in pharmaceutically effective amount.

(57) Abstract: A seal shield for shock absorbers for land vehicles and the like, which consists of a circular metallic disc (1) having an opening in its center. The circular metallic disc is provided with a uniform coating of rubber or the like material (2). The said uniform coating of rubber or the like material forms two lips namely an upper lip (3) and a lower lip (4) on the inner rim of the central opening of the circular metallic disc. The upper lip (3) has a rounded edge and the lower lip (4) has a tapered edge.

(64) Filed on: N.A.	

(57) Abstract : Stable, water soluble and low salt containing, Sulfonated Melamine Formaldehyde resin solution is prepared in a four stage process. In the first stage Melamine is condensed with Formaldehyde in an aqueous medium at a relatively low temperature of 45-60 degree C and a pH of 10-12. This is followed by the addition of a sulfonating agent such as Sodium Meta bisulfite to carry out sulfonation reaction at a temperature ranging between 70-90 degree C for about 50-90 minutes. The third stage consists of a polymerization step wherein the pH of the reaction mass is reduced to 4-5.5 along with the temperature to 45-65 degree C and the reaction is carried out for about 15-45 minutes. The pH is then adjusted to 6.5 - 8.6 to stop further reaction. In the final stage, reaction medium is heated to 80-95 degree C for 60-120 minutes. The resultant aqueous solution is adjusted for desired solid content after increasing the pH to 9-12. The resultant aqueous solution is suitable for use as super plasticizer additive to hydraulically settable cementitious materials.

(57) Abstract : An apparatus for rectifying and chamfering of ceramic and vitrified tiles and also natural stone tiles of granite, marble sand stone, slate and artificial stone and the like material consists of a close grain cast iron beam on which there are two slides operated by a right hand and left hand lead crew respectively. The led screw mounted in heavy bearings is provided to set the slides for different width of the tiles ranging from 200 mm to 600 mm. It is also possible to have various models ranging in widths from 50 mm upto 3000 mm or as per requirement. Two Hand wheels are provided on the lead screws to set the desired gap between the slides.

(57) Abstract : To provide an LED lighting system in which LEDs can be disposed in a three-dimensional form with high accuracy and without differences between individual products.

A light source portion 175 of a head light unit includes a reflector plate 776, a substrate 178 and a stepped form support base 188. The reflector plate 776 is included of a curved reflective surface provided with a multiplicity of openings arranged in a matrix form, and a white-color high-luminance LED 177 is contained in each of the openings so that a part thereof is exposed by a predetermined height from the reflective surface. The height of each of the LEDs 177 is determined by the step height of the support base 188. Further, wipers 833, 834 are respectively provided on the front side of the vehicle body of switch cases 831. The surroundings of the handle can be made compact, and since electrical equipments inclusive of the wipers are concentrated at the switch cases, electrical wiring can be easily carried out, and productivity can be enhanced.

(64) Filed on: N.A.	

(57) Abstract : In the present invention, following a sequence of extraordinary simple steps, ferromagnetic chromium dioxide of substantially high purity has been produced. More significantly, this method is unique in a sense that it does not require pressure as a control parameter during the process of synthesis. Further, CrO_2 / Cr_2O_3 composites have also been prepared where the fraction of insulating Cr_2O_3 in metallic CrO_2 can be easily controlled. Both CrO_2 as well as CrO_2 / Cr_2O_3 composites are basically magnetoresistive materials and have potential for application in rapidly evolving area of Spintronics (device based on spin polarized current). Stoichiometric CrO_2 has shown 100 percent spin polarization and is therefore the best candidate for making magnetic tunnel junction and other devices based on switching action.

(57) Abstract :

Disclosed is a portable mobile terminal which comprises a terminal body having a first contacting point for receiving power, at least one battery having a corresponding second contacting point to be combined to the first contacting point, and being coupled to top, bottom, front, rear or side surfaces of the terminal body; a combiner for selectively and removably combining the terminal body and the battery; and a battery affixer for supporting the battery so as to maintain the coupled state of the battery. The combiner comprises; a dovetail groove provided on one surface of the terminal body; and a dovetail protrusion provided on the battery and being selectively combined with the corresponding dovetail groove.

(57) Abstract : The invention relates to a method for improving the filling ability of tobacco, such as cut tobacco leaves, or ribs, or tobacco additives, whereby the tobacco material with an initial water content of up to 15 wt % is treated with a gas, comprising nitrogen and/or argon, at pressures from 50 to 1000 bar with a continuous, or staged compression, followed by a continuous or staged decompression, whereby the compression and decompression steps occur in, either an autoclave, or a cascade-like series of several autoclaves and, finally, a thermal after-treatment of the withdrawn tobacco material. The invention is characterised in that the compression is carried out at a working temperature of over 55°C, preferably from 60 to 90°C and the final water content of the tobacco is in the range of 8 to 14 wt. %.

(57) Abstract : The invention relates to a method for improving the filling ability of tobacco, such as cut tobacco leaves, or ribs, or plant tobacco additives with a cell structure, whereby the tobacco material, with an initial water content of 8 to 16 wt %, is treated with a gas, comprising nitrogen and/or argon at pressures from 50 to 1000 bar, either in an autoclave, or in a cascade-like series of several autoclaves and, finally, after completion of a decompression, a thermal after-treatment. The invention is characterised in that the decompression is carried out with at least one holding stage, the pressure of which corresponds to 3 to 60%, preferably, 3 to 30% of the original maximum pressure and that the heating of the system under residual pressure is carried out, such that the temperature of the tobacco on withdrawal after the complete release of pressure is in the range 10 to 80°C. The elevation of temperature of the system under residual pressure is effected by a holding stage, a circulation over a heat exchanger and/or passing hot gas over the system, whereby the release of pressure from the maximum pressure to the pressure of the holding stage occurs over a period of 20 seconds to 5 minutes and the release of the residual pressure occurs over a period of 3 seconds to 3 minutes.

(57) Abstract :

A system and method are provided for cooling transformers utilizing a fluid to air heat exchanger to cool dielectric fluid flowing through the transformer. The system includes multiple vertical cooling tubes in fluid communication with the transformer to cool the dielectric fluid. The tubes are configured to create vertical air passages such that the system utilizes natural convention airflow and thermal siphoning to cool the fluid.

(57) **Abstract :** A synthetic polymer yarn comprising a bicomponent yarn and a second yarn combined to form a single yarn is disclosed. The bicomponent yarn is made up from a first component and a second component each comprises of a fiber-forming polymer and each having different shrinkages from the other to effectuate a bulking effect. This differential shrinkage may be obtained, for example, by using different polymers or similar polymers having different relative viscosities. The synthetic polymer yarn of the present invention has advantageously exhibited an improved visual effect, including a stratified effect, which improves the visual composition of products produced using the yarn. Moreover, the fabrics produced from the yarn have improved hand and stretch and recovery.

(57) Abstract : The invention describes a process for preparing a warm mix asphalt composition by mixing an aggregate grain material with a soft binder, and adding a hard binder to the mixed aggregate grain material. The hard binder is foamed in a foaming process before it is introduced to the mixed grained aggregate material. A system for preparing the warm mix asphalt composition comprising a drying drum for heating and drying the aggregate component, a mixing mill for mixing the asphalt component and a mix storage silo, where the system also includes foam production facilities for foaming the hard binder before introduction to the mixing mill, is also disclosed.

(57) Abstract : A process for purifying statin compounds from a fermentation broth by extraction and crystallization is disclosed. A fermentation broth is subjected to a pretreatment procedure which involves an alkaline pretreatment and an alkaline purification. Following the pretreatment procedure, the statin compound is extracted under acidic conditions into a hydrophobic solvent and purified by crystallization. The organic extraction solvent is concentrated and then extracted with a mild base. The statin compound is then purified by crystallization.

	4) JENSEN PATRICK S.

(57) Abstract : Featured are new methods for performing intra-ocular surgery that allow surgical personnel to access the intra-ocular volume to perform a surgical procedure or technique but which does not require the use of sutures to seal the sclera and/or conjunctiva following the procedure. The methods of the present invention generally include providing an entry alignment device and inserting the entry alignment device into an eye through both the conjunctiva and sclera so as to form an entry aperture that extends between the exterior of the eye and the intra-ocular volume within the eye. The provided alignment device is configured so as to form or provide an aperture or opening in each of the conjunctiva and sclera of the eye and to maintain these apertures or openings in each of the conjunctiva and sclera aligned during the surgical procedure so these apertures or openings form the entry aperture. In more particular aspects, the provided entry alignment device is sized such that when the entry alignment device is removed from the eye following the completion of the surgical procedure, the aperture or opening formed in the sclera seals without the use of sutures. In a more specific aspect of the present invention, the provided entry alignment device is sized such that the apertures or openings and thus the entry aperture are self sealing. In other embodiments, a plurality of entry alignment devices are provided so a plurality of entry apertures can be formed in the eye. The invention also features a high speed vitreous cutting and aspirating device particularly configured for use in such methods and surgical procedures and techniques as well as the related entry alignment devices and other surgical instruments.

(57) Abstract :

The invention relates to a toothed rotor set for a pump or a motor. Said set consists of a rotatable outer rotor which is provided with an approximately star-shaped bore having a fine inner toothing and an inner rotor that is accommodated in the bore in an excentrical manner. Said inner rotor is provided with bearing pockets for planetary gears that are provided with a fine toothing by means of which said gears unwind in the fine toothing of the outer rotor. The planetary gears produce a toothing which forms an outer toothing that is provided with one tooth less than the inner toothing of the outer rotor.

---	--

(57) Abstract :

A processing system has a processor core (104) executing instructions of a first instruction set and an instruction translator (108) for generating translator output signals corresponding to one or more instructions of the first instruction set so as to emulate instructions of a second instruction set. The instruction translator (108) provides translator output signals specifying operations that are arranged so that the input variables to an instruction of the second instruction set are not changed until the final operation emulating that instruction is executed. An interrupt handler services an interrupt after execution of an operation of the instructions of the first instruction set. Arranging the translated sequences of instructions such that the input state is not altered until the final instruction is executed has the result that processing may be restarted after the interrupt either by rerunning the complete emulation if the final operation had not started when the interrupt occurred, or by running the next instruction from the second instruction set if the final operation has started when the interrupt occurred.

(57) Abstract :

A data processing system is provided with an instruction (ADD8T016) that unpacks non-adjacent portions of a data word using sign or zero extension and combines this with a single-instruction-multiple-data type arithmetic operation, such as an add, performed in response to the same instruction. The instruction is well suited to use within systems having a data path (2) including a shifting circuit (6) upstream of an arithmetic circuit (8).

(57) Abstract :

The invention concerns a Foucault current braking device, comprising at least a heat exchanger for dissipating thermal energy due to Foucault currents when braking. The invention is characterised in that each heat exchanger is arranged to define a predetermined cooling liquid path to minimize pressure drop and maximize the flow rate of the cooling liquid flowing through the exchanger, so as to reduce working temperature variations of the heat exchanger, the device comprising two symmetrical heat exchangers, whereof the water inlets (72, 73), circuits and outlets (75, 76) are symmetrically arranged so as to compensate forces due to cooling liquid currents thereby minimising the corresponding residual torque

(57) Abstract : The present invention is directed to enhancing the accuracy with which tooth restorations are machined, using a device which can accurately copy mill a dental prosthetic blank from a previously formed dental prosthetic model, and which can closely replicate the feel of a dental tool to which dentists are accustomed. The device uses a tool supported on a linear rotary axis to mill the dental prosthetic blank. In addition, exemplary embodiments are directed to the preparations of a hybrid dental prosthetic blank which can be easily machined.

(54) Title of the invention: MULTI-RIBBED CVT BELT

<p>(51) International classification: F16G 5/16</p> <p>(30) Priority Data :</p> <p>(31) Document No.: 09/510, 683</p> <p>(32) Date : 22/02/2000</p> <p>(33) Name of convention country : USA</p> <p>(66) Filed U/s. 5(2) : NO</p> <p>(61) Patent of addition to application No.: NIL</p> <p>(62) Filed on : N.A.</p> <p>(63) Divisional to Application No.: NIL</p> <p>(64) Filed on: N.A.</p>	<p>71) Name of the Applicant:</p> <p>THE GATES CORPORATION</p> <p>Address of the Applicant: 900 SOUTH BROADWAY, DENVER, CO 80209, U.S.A.</p> <p>72) Name of the Inventor:</p> <p>1) SERKH ALEXANDER</p>
--	--

(57) Abstract :

The invention comprises a plurality of clips (10) arranged about a tensile member (20) or core belt. The tensile member comprises a multi-ribbed belt. The multi-ribbed belt may comprise any standard multi-ribbed belt readily available in the art. The clips are generally u-shaped and have opposing inclined side that cooperate with the sides of a CVT pulley. The opposing inclined sides of each clip can have a thermoset, thermoplastic or phenolic coating to provide a predetermined coefficient of friction. Each clip has a multi-ribbed profile bearing surface that cooperates with the multi-ribbed portion of the core belt. The clips are held in proper orientation to the multi-ribbed belt by elastomeric bands (22, 31). The elastomeric bands are routed through a slot (11, 18) in each clip which then compresses the clips together.

(54) Title of the invention: **FLAME-RESISTANT POLYCARBONATE MOULDING COMPOUNDS**

<p>(51) International classification: C08K 5/523</p> <p>(30) Priority Data :</p> <p>(31) Document No.: 100 10 941.1</p> <p>(32) Date : 06/03/2000</p> <p>(33) Name of convention country : GERMANY</p> <p>(66) Filed U/s. 5(2) : NO</p> <p>(61) Patent of addition to application No.: NIL</p> <p>(62) Filed on : N.A.</p> <p>(63) Divisional to Application No.: NIL</p> <p>(64) Filed on: N.A.</p>	<p>71) Name of the Applicant:</p> <p>BAYER AKTIENGESELLSCHAFT</p> <p>Address of the Applicant:</p> <p>51368 LEVERKUSEN, GERMANY</p> <p>72) Name of the Inventor:</p> <p>1) SEIDEL ANDREAS 2) ECKEL THOMAS 3) KELLER BERND 4) WITTMANN DIETER</p>

(57) Abstract : The invention relates to flame-resistant polycarbonate compositions which are made flame-resistant without the use of chlorine or bromine. Said compositions contain ≤ 0.1 wt. % fluorine and are characterised by excellent flame resistance, even with low wall thickness, combined with improved mechanical, thermal and rheological properties and especially by good ESC properties. The invention also relates to the use of the inventive polycarbonate moulding compounds for producing moulded bodies and moulded parts and all kinds of extrusion profiles.

(57) Abstract :

Figure : NIL

The present invention relates generally to methods for stimulating cells, and more particularly, to a novel method to concentrate and stimulate cells that maximizes stimulation and/or proliferation of such cells. In the various embodiments, cells are stimulated and concentrated with a surface yielding enhanced proliferation, cell signal transduction, and/or cell surface moiety aggregation. In certain aspects methods for stimulating a population of cells such as T-cells, by simultaneous concentration and cell surface moiety ligation are provided by contacting the population of cells with a surface, that has attached thereto one or more agents that ligate a cell surface moiety and applying a force that predominantly drives cell concentration and cell surface moiety ligation, thereby inducing cell stimulation, cell surface moiety aggregation, and/or receptor signaling enhancement. Also provided are methods for producing phenotypically tailored cells, including T-cells for the use in diagnostics, drug discovery, and the treatment of a variety of indications, including cancer, viral infections, and immune related disorders. Compositions of cells having specific phenotypic properties produced by these processes are further provided.

(57) Abstract :

The invention concerns a recombinant adenylyl cyclase, comprising at least a polypeptide sequence including one or several cleavage site of at least a molecule with site-specific proteolytic activity, said polypeptide sequence being inserted in the catalytic domain of an adenylyl cyclase while preserving its enzymatic activity. The invention also concerns methods for screening molecules with proteolytic activity using said recombinant adenylyl cyclase.

---	--

(57) Abstract : The piston sleeve (10) has a radial positioning surface (32) adjacent to the top surface (16) and an axial positioning surface (38) separated from radially positioning surface by a coolant contact surface (46). A piston bore extending the length of the piston sleeve (10) is machined to form a non-cylindrical bore. The sleeve is compressed by applying force to the top surface (16) and to the axial positioning surface (38). The piston sleeve (10) is also heated to a normal working temperature. The compression force and the force due to thermal expansion deforms the piston sleeve and changes the non-cylindrical bore into a substantially cylindrical bore.

---	--

(57) Abstract :

The invention relates to a method for producing a container (1) that comprises an outer container (2), an inner pouch (34) disposed therein, and a pressure compensation opening (10) provided in the outer container (2). The invention also relates to a container (1) produced by the inventive method. A preform consisting of two coaxial tubes is produced by a coextrusion blow-molding method using a blow mold, whereby a bottom seam (5) is produced that protrudes outwardly. The aim of the invention is to provide a method by which a container (1) is provided with a pressure compensation opening (10) in the outer container (2) without impairing the tightness of the container (1) while reducing the reject rate and increasing productivity. To this end, the bottom seam (5) is partially cut away and a force is applied on the preform that still has a temperature of 40°C to 70°C, said force acting in the direction of the seam. Said force breaks up the bottom seam (5) and plastically deforms it so that a pressure compensation opening (10) is formed in the bottom area (4).

--	---

(57) Abstract : The present invention relates to processes for preparing protected allylated clarithromycin oxime, preferably 6-O-methy-2',4"-bis(trimethylsilyl)-erythromycin A 9-O-(2-methoxyprop-2-yl)oxime ("S-MOP oxime"), and for converting protected allylated clarithromycin oxime, preferably S-MOP oxime, to clarithromycin. Processes for preparing protected allylated clarithromycin oxime according to the present invention, include reacting a silyl oxime derivative with methylating agent in the presence of at least one solvent and a base, where the solvent comprises methyl tertbutyl ether. Processes for converting protected allylated clarithromycin oxime to clarithromycin according to the present invention, include reacting protected allylated clarithromycin oxime with ethanol and water at an ethanol to water ratio of about 1:1, in the presence of an acid and a deoximating agent and cooling the reaction mixture prior to adding sodium hydroxide, where the process takes place without any additional water addition. Further processes for converting protected allylated clarithromycin oxime to clarithromycin, include heating a mixture of protected allylated clarithromycin oxime, acid, and deoximating agent in an ethanol/water solvent to reflux for more than 4 hours, with a two-fold addition of deoximating agent to produce essentially oxime-free clarithromycin.

(57) Abstract : The invention relates to compositions containing a graft polymer which can be obtained by radical polymerisation, a vinyl (co)polymer and optionally, resins selected from the following group: polycarbonates, polyester carbonates, polyesters and polyamides. The invention is characterised in that the process of producing the graft polymer A) comprises adjusting the pH of the rubber latex to a value of 9 to 11 before the beginning of the graft polymerisation reaction, using redox initiator components in quantities of 0.1 to 2.5 wt. % (in relation to the monomers added) and ensuring that the pH value neither exceeds 11.0 nor falls below 8.8 throughout the entire graft polymerisation reaction and remains constant during the reaction, within a variation range of ± 0.5 units; the temperature difference between the beginning and the end of the reaction being at least 10°C.

(57) Abstract : Physiologically acceptable films, including edible films, are disclosed. The films include a water soluble film-forming polymer, such as pullulan, and a taste masked pharmaceutically active agent, such as dextromethorphan. The taste masking agent is preferably a sulfonated polymer ion exchange resin comprising polystyrene cross-linked with divinylbenzene, such as AMBERLITE. Methods for producing the films are also disclosed.

(57) Abstract : Extended dosage forms of stavudine are provided comprising beadlets formed by extrusion-spheronization and coated with a seal coating. The beadlets are also coated with a modified release coating such that a hard gelatin capsule containing such beadlets will provide blood levels of stavudine over approximately 24 hours. The beadlets are prepared from a dry blend of stavudine, a spheronizing agent, a suitable diluent and a stabilizing amount of magnesium stearate. The magnesium stearate, in contrast to other similar pharmaceutical adjunct, has been found to stabilize stavudine against degradation due to hydrolysis in the presence of the limited amount of water necessary for the extrusion-spheronization process. Also included in the scope of the invention are hard gelatin capsules containing, in addition to the stavudine beadlets, similar beadlets containing other therapeutic agents utilized to treat retroviral infections.

ZD6126

The invention concerns the use of a vascular damaging agent or a pharmaceutically acceptable salt thereof in the manufacture of a medicament for administration in divided doses for use in the production of a vascular damaging effect in a warm-blooded animal such as a human. In particular the vascular damaging agent is ZD6126, or a pharmaceutically acceptable salt thereof. The invention also relates to methods of treatment using a vascular damaging agent in divided doses.

(57) Abstract :

A method, a communication system and a receiver device (1) are disclosed, for the billing of access controlled programmes and/or data, distributed unidirectionally and encoded, by a broadcast transmitter (2, 2') and received by at least one receiver device (1). A monetary value is stored in a data store (16) in the receiver device (1). Costs for access to access controlled programmes and/or data are determined in the receiver device (1) based on received cost data, and decoding of the access controlled programmes and/or data blocked in the receiving device, should the determined cost be greater than the stored monetary value. For allocation of credits to the suppliers of access controlled programmes and/or data, clearance slips are generated in the receiving device (1) and transmitted to a clearing centre (3), by means of various data channels.

(57) Abstract :

A method and a communication system are disclosed, for the billing of access controlled programmes and/or data, which are distributed in an encoded and unidirectional manner by a broadcast transmitter (30) and received by at least one receiver device (10). Access to the encoded programmes and/or data is by decoding in the receiver device; when received access requirement data, for the access controlled programmes and/or data, agree with authorization data for the user. Clearing data is transmitted from the central unit (20) to a clearing module (201), comprising clearing data, billing data for the said access to the unencoded access controlled programmes and/or data and user data. The central unit (20) offers the provider information about the user data, corresponding to the received clearing data, said information is generated by the central unit (20), according to fixed subsequent use conditions. The invention, in particular, relates to mobile radio equipment with in-built broadcast receivers, connected to a clearing centre, by means of a mobile radio network.

(57) Abstract :

1 INPUT FILTER
2 RECTIFICATION CIRCUIT
3 CURRENT LOOP
4 VOLTAGE LOOP
5 TWO BLOCK DIAGRAMS MAY BE MUTUALLY SUBSTITUTED

The present invention discloses a three-phase single switch power factor correcting boost convertor. It includes three-phase input, output, three-phase rectification circuit, pulse width modulation circuit, voltage loop and current loop. The positive input of the current loop is connected to the output of the voltage loop, the negative input is connected to the output of the current sampling circuit, and the output of the current loop is connected to the positive input of the pulse width modulation circuit. As long as the provided circuit parameters satisfy certain conditions, the input power range of the harmonic wave in IEL1000-3-2A standard may be increased greatly.

---	---

(57) Abstract :

Figure : 2.

A gas recovery device (10) utilizes gas permeable liquid impermeable membranes to strip a gas (15) from gas containing liquids, such as brine in subterranean geological formations. Device (10) includes shell (22) having perforated outer walls (23) and a plurality of elongated permeation tubes (30). Only one end (32) of tubes (30) is attached to a plenum (26) with the tube lumina (37) in fluid communication therewith. The remainder of tubes (30) is not anchored and is therefore free to move which provides agitation within shell (22) effective to disturb the boundary conditions at the surface of tubes (30) thereby promoting transport of gas (15) there through. Device (10) can be deployed within casing (12) of a well suspended by a product discharge pipe (17) and immersed in gas-containing brine flowing from a natural geological formation. Gas (15) transports into tube lumina (37), collects in plenum (26), and is displaced through pipe (17) for use at a remote location.

(57) Abstract :

This invention provides compounds of Formula (1), their *N*-oxides and agriculturally suitable salts wherein A, B, J, R¹, R², R³ and R⁴ and n are as defined in the disclosure. Also disclosed are methods for controlling arthropods comprising contacting the arthropods or their environment with an arthropodically effective amount of a compound of Formula (1) and compositions containing the compounds of Formula (1).

(57) Abstract : A catalytic reaction of atomic hydrogen is provided which produces amore stable or lower energy atomic hydrogen atom than uncatalyzed atomic hydrogen. The catalyzed lower energy hydrogen aiom may serve as a reactant of a disproportionation reaction whereby it which accepts energy from a second catalyzed lower energy hydrogen atom to cause a further release of energy as the first atom undergoes a nonradiative electronic transition to a higher energy level while the second undergoes a transition to a lower energy level. The catalytic reaction and disproportionation reaction of lower energy atomic hydrogen may produce light, plasma, power, and novel hydrogen compounds. The light, plasma, power and compound source comprise a cell of the catalysis of atomic hydrogen and disproportionation reaction of lower energy atomic hydrogen to form novel hydrogen species and compositions of matter comprising hydrogen that is more stable or lower energy than uncatalyzed hydrogen. The compounds comprise at least one neutral, positive, or negative hydrogen species having a binding energy greater than its corresponding ordinary hydrogen species, or greater than any hydrogen species for which the corresponding ordinary hydrogen species is unstable or is not observed.

(57) Abstract :The invention relates to a method of regulating a roasting furnace in fluidized bed roasting. Part of the roasting furnace grate is separated off into a separate grate section, known as the overflow grate. Where the nozzles and the amount of roasting gas blown through them can be regulated independently of the main grate. It is advantageous to position the separately regulated grate in the section of the furnace where the overflow aperture is located.

(57) Abstract :

The invention relates to a method for producing a photovoltaic thin film module (1) which is provided with a thin film solar cell system (2) that is mounted on carrier materials (3) and is covered with a compound (4) on at least one side of the surface, whereby said compound consists of an encapsulating material and is provided with a sealing layer (5) on the side of the surface thereof, said side being arranged on the thin film solar cell system (2). According to a covering method. The encapsulating material (4) and the thin film solar cell system (2), together with the carrier (3), are guided along one another and are pressed under pressure and at an increased temperature in such a way that a weather-proof, photovoltaic thin film module in the form of a compound (1) is designed. According to a method that can be carried out easily, a photovoltaic thin film module that is resistant to UV light, water vapour and other effects of the weather is provided. The photovoltaic module can additionally be provided with flexible characteristics by selecting the carrier material in such a way that said material is configured in the form of plastic foils or plastic foil compounds for instance.

(57) Abstract : A method of reducing of reducing dye fading of fabrics in laundry bleaching compositions is provided, comprising contacting stained fabric, in a wash liquor, with a bleaching composition that comprises a specified bleach catalyst. The bleach catalyst comprises a ligand which forms a complex with a transition metal, the complex catalyzing bleaching of stains by atmospheric oxygen. And the composition is substantially devoid of peroxygen bleach or a peroxy-based or-generating bleach system. The bleaching composition provides effective bleaching performance on fabric stains without causing unacceptable dye damage or dye fading of the fabrics after repeated washes.

(57) Abstract :

The invention relates to ligands or complexes useful as catalysts for catalytically bleaching substrates with atmospheric oxygen, and as catalysts in the of treatment of textiles such as laundry fabrics whereby bleaching by atmospheric oxygen is catalysed after the treatment. The ligand is of the general formula (I) wherein R₁, R₂, and R₃ independently represent a group selected from methyl, pyridin-2-yl, quinolin-2-yl, pyrazol-1-yl, 3,5-dimethylpyrazol-1-yl, N-methyl-amido, and N-isopropyl-amido; provided at least two of R₁, R₂ and R₃ represent a coordinating group, the ligand being selected from: 1,4-bis(pyridin-2-ylmethyl)-7-ethyl-1,4,7-triazacyclononane; 1,4-bis(quinolin-2-ylmethyl)-7-ethyl-1,4,7-triazacyclononane; 1,4-bis(pyrazol-1-ylmethyl)-7-ethyl-1,4,7-triazacyclononane; 1,4-bis(3,5-dimethylpyrazol-1-ylmethyl)-7-ethyl-1,4,7-triazacyclononane; 1,4-bis(N-methylimidazol-2-ylmethyl)-7-ethyl-1,4,7-triazacyclononane; 1,4,7-tris(quinolin-2-ylmethyl)-1,4,7-triazacyclononane; 1,4-bis(N-isopropylacetamido)-7-ethyl-1,4,7-triazacyclononane; and 1,4-bis(N-methylacetamido)-7-ethyl-1,4,7-triazacyclononane.

--	---

(57) Abstract : A cosmetic product is provided packaged in a dispenser with separate first and second storage areas. The first of the areas contains a first cosmetic composition containing a first dermal active agent, preferably selected from keratolytic skin agents. Particularly preferred are alpha-and beta-hydroxy carboxylic acids as first dermal active placed in a composition having a pH from about 1 to about 5.5. The second area contains a second cosmetic composition with a second dermal agent incompatible with the first composition. Particularly preferred second dermal agents are retinoids, vitamins, enzymes and anti-oxidants. Most preferred is retinal. The dispenser allows transfer of the first and second composition through an exit nozzle in a respective dispensing weight ratio of from about 30:1 to about 2:1

(57) Abstract :

A method and means for simultaneously inserting weft/binding yarns (45) and their beating-up, in textile manufacturing processes like 3D-weaving and uniaxial noobing, is disclosed. A yarn carrier (90; 39; 22) is equipped with a beating-up reed dent (27; 28). In carrier (90), which comprises a cartridge-like yarn supplying means (1x), the yarn (45) is arranged around two axes of rotation (X1 and X2) and it is enclosed in a case. It is particularly suitable for 3D textile-forming processes like 3D-weaving and uniaxial noobing because of its relatively low-height but high-width and hence the possibility of carrying relatively large amount of yarn. The yarn (45) is contained on a flanged belt (15) that can be driven either from within or from outside of the means (1x). Such a cartridge-like yarn supplying means (1x) is equipped with

tips (18a, 18b) that are offset or displaced oppositely about the central axis. Such a displaced arrangement of the tips directs the carriers (90; 22) to lay yarn (45) in two different paths, relative to a layer of warp/axial yarns, while traversing back and forth in the same linear path. Through such a method the 3D-weaving and uniaxial noobing processes can be made efficient. The yarn supplying means (1x) could also be useful in other textile processes.

(57) Abstract :

A cervical sampling system for collecting a cervical sample for a Pap test. The cervical sampling system includes an insertion tube (2) and an introduction guide member (20) that guides the insertion tube (2) into a vaginal cavity. The vaginal insertion tube (2) includes an insertion depth indicator (12) to allow the user to determine the appropriate depth to insert the tube (2). A cervical sampler (50) is positioned within the vaginal insertion tube (2) and extends into the vaginal cavity to collect samples. The insertion tube (2) and cervical sampler (50) include signalling members which cooperate to indicate to the user when the cervical sample (50) has been rotated through a complete revolution.

(57) Abstract :

The present invention is related to pyrrolidine derivatives of formula (I). Said compounds are preferably for use as pharmaceutically active compounds. Specifically, pyrrolidine derivatives of formula (I) are useful in the treatment and/or prevention of premature labor, premature birth and dysmenorrhea. In particular, the present invention is related to pyrrolidine derivatives displaying a substantial modulatory, notably an antagonist activity of the oxytocin receptor. More preferably, said compounds are useful in the treatment and/or prevention of disease states mediated by oxytocin, including premature labor, premature birth and dysmenorrhea. The present invention is furthermore related to novel pyrrolidine derivatives as well as to methods of their preparation, wherein X is selected from the group consisting of R^6R^7 , NOR^6 , NNR^6R^7 ; A is selected from the group consisting of $-(\text{C}=\text{O})-$, $-(\text{C}=\text{O})-\text{O}-$, $-\text{C}(=\text{NH})-$, $-(\text{C}=\text{O})-\text{NH}-$, $-(\text{C}=\text{S})-\text{NH}-$, $-\text{SO}_2-$, $-\text{SO}_2\text{NH}-$, $-\text{CH}_2-$, B is either a group $-(\text{C}=\text{O})-\text{NR}^8\text{R}^9$ or represents a heterocyclic residue having the formula (a) wherein Q is NR^{10} , O or S; n is an integer selected of 0, 1 or 2; Y, Z and E form together with the 2 carbons to which they are attached a 5-6 membered aryl or heteroaryl ring.

(57) Abstract :

The invention concerns a device for accurately locating ends of cords, wires cables or conduits, in particular in the fields of electricity, electronics, telephone and computer. It consists in providing, in or on each cord, (6), wire, cable or conduit, at least an optical fibre (10) extending from one end (7) to the other (8) of the cord (6) or the like. On first end (11) of the optical fibre (10) is accessible at the corresponding end (7) of the cord (6) so as to be illuminated (F) by light injecting means. The second end (12) of the optical fibre (10) is accessible at other end (8) of the same cord (6), so as to restore (D) the light injected at the first end (7). Said device is useful for locating computer switching cords.

(57) Abstract :

The invention relates to a method for the production of a vascular damaging effect in a warm-blooded animal such as a human, which comprises administering to said animal an effective amount* of ZD6126 or a pharmaceutically acceptable salt thereof, before, after or simultaneously with an effective amount of one of the following therapies: i) ionizing radiation; ii) a platinum anti-tumour agent; and iii) a taxane. The invention also relates to the use of ZD6126 and one of the above therapies in the manufacture of medicament for use in the production of vascular damaging effect in a warm-blooded animal such as a human and to pharmaceutical compositions and kits each comprising ZD6126 and one of a platinum anti-tumour agent and a taxane.

(57) Abstract :

A dispensing system (30) is provided for dispensing a product from a container having an opening. The dispensing system includes a spout (38) for communicating with the container opening. The spout (38) defines at least one discharge aperture (46), a distal seal surface (54) located distally of the discharge aperture, and a proximal seal surface (56) located on the exterior of the spout (38) proximally of the discharge aperture (46). A nozzle assembly (60, 70, 80) is mounted on the spout (38) for movement between a retracted, closed position and an extended, open position. The nozzle assembly (60, 70, 80) includes a nozzle (60) having a dispensing passage (86) around at least a portion of the spout (38), a proximal seal surface (90) for sealingly engaging the spout proximal surface (56), and a distal seal surface (96) located outwardly of the nozzle proximal seal surface (90) for sealingly engaging the spout distal seal surface (54) when the nozzle assembly is in the retracted, closed position. The nozzle assembly also includes a resiliently flexible valve (70) that is sealingly disposed across the nozzle dispensing passage (86) at a location distally of the spout distal seal surface (54) and has an initially closed dispensing orifice (132) which opens in response to a pressure differential acting across the valve (70).

<p>(51) International classification: G06F 17/00</p> <p>(30) Priority Data :</p> <p>(31) Document No.: 09/512,845</p> <p>(32) Date : 25/02/2000</p> <p>(33) Name of convention country : USA</p> <p>(66) Filed U/s. 5(2) : NO</p> <p>(61) Patent of addition to application No.: NIL</p> <p>(62) Filed on : N.A.</p> <p>(63) Divisional to Application No.: NIL</p> <p>(64) Filed on: N.A.</p>	<p>71) Name of the Applicant:</p> <p>OCWEN TECHNOLOGY XCHANGE</p> <p>Address of the Applicant: 1675 PALM BEACH LAKES BOULEVARD, SUITE 1002, WEST PALM BEACH, FL 33401, U.S.A.</p> <p>72) Name of the Inventor:</p> <p>1) RAMANATHAN RAVI 2) JOHNSON EDMUND M. 3) GRAVES MICHAEL A.</p>

(57) Abstract : A computer system facilitates communication and business activities between multiple business entities by use of a common communications network, such as the Internet. The system stores a plurality of business objects which define business activities between parties. Each business object has a plurality of states each representing a stage of processing. A group of work units define functions that are performed for the business object and typically each work unit involves a transition between states of the business object. A series of business rules defines the validity of the work units for each state as well as restrictions on activities that can be performed by the business object. Preprocessing and postprocessing steps corresponding to the current environment are performed respectively before and after a completed data file is stored in a system database. A defined file format, such as XML, is utilized for the internal processing and storage of data for a business transaction. The system can receive the standardized file format or can translate any proprietary file into the standardized format. Communication to a recipient is done as a file with a format defined by the recipient. The output files can be either in the standardized format or translated into a particular required format associated with the recipient. New business objects can be added to the system to expand the range of business activities that can be supported. This is done on a modular basis so that any type of business activity and a wide range of business can be processed by the system.

(57) Abstract : A metering gate for liquid metal flow control (1010) with reduced clogging with a top plate (1030), having a first flow channel bore (1031) with an inlet (1032) having an inlet axis (1015) and an outlet (1038) having an outlet axis (1033). The inlet axis (1015) and the outlet axis (1033) are offset (1036). A throttle plate (1040) slidably mounted on the top (1030) plate selectably receives flow from the top plate (1030). The metering gate (1010) provides a less tortuous and more symmetrical flow path when the gate is partially open, but provides a relatively straight downward flow channel allowing full flow when the gate is fully open.

(57) Abstract :

A centrifugal clutch for coupling a drive shaft (11) to a driven member (13) at rotary speeds above a predetermined threshold, comprising: a centrifugal slider (15) with a massive enlargement (155) at one end and a first coupling formation (156) preferably at the other end; a frame (12) formed to carry the centrifugal slider on formations (121, 122, 123, 124) to constrain it to sliding motion between an extended radial position and a retracted radial position, and to fit on the drive shaft to be driven by it, with the shaft at right-angles to the axis of sliding motion of the frame; an output drive member mountable for free rotation on the drive shaft and formed for driving engagement with the driven member in use, and formed with a second coupling formation (131) which connects drivingly with the first only when the centrifugal slider is at its extended position; and means (16) preferably located wholly within a recess (151) in the centrifugal slider, for biasing the centrifugal slider toward its retracted position; whereby rotation of the centrifugal slider and frame causes the massive enlargement to pull the centrifugal slider radially from its retracted to its extended radial position to cause the first (155) and second coupling arrangements to interengage and thus to transmit rotary drive from the drive shaft to the driven member, but the biasing means causes disengagement when the rotation ceases, so as to decouple the drive shaft from the driven member

(57) Abstract :

Figure : 2B

A system allowing the tea bag/infusion packet (14) to dispense health enhancing agents and promote the sale and use of safe and health enhancing beverages. The basic packet (14) is a permeable sac containing soluble ingredients tethered to a tag (16). In one embodiment soluble dietary fiber, nutraceuticals, enzymes, and other health promoting ingredients are dispensed. In one embodiment the tag (16) forms part of a game, acts as a prize, or toy, or otherwise promotes the sale and use of the product. In one embodiment the packet (14) is modified to change color or reveal indicia upon contact with water. An additional support member may be supplied to hold or join the infusion packets (14) and may act as a toy, or prize, or game piece. For use in bottles, such as water bottles, a version is provided with features to prevent accidental ingestion of the infusion packet (14).

A washing machine having a spray nozzle assembly, comprising:

A housing having a control board at an upper portion thereof;

An outer tub disposed in the housing so as to receive a washing liquid;

A spraying nozzle assembly for spraying the washing liquid into a washing object held in the spin tub; and

a circulation pump disposed at a lower portion of the housing and communicated with the outer tub so as to circulate the washing liquid into the spraying nozzle assembly through a circulation tube or to drain the washing liquid into an exterior of the washing machine through a draining tube.

Wherein the spraying nozzle assembly is mounted on an upper portion of the outer tub so as to evenly spray the circulated washing liquid into the washing object, sprays some of the circulated washing liquid toward an upper inner wall of the outer tub and has an upper frame and a lower frame secured to the upper frame, the lower frame having a plurality of spraying nozzle at an underside thereof for spraying the circulated washing liquid.
